STRATEGIC PRIORITIES FOR THE DEVELOPMENT OF NATIONAL ECONOMY

Summary

The article describes, that the main principles of economic growth of Ukraine should be: innovation, sustainability and involvement of all segments of the population in the results of economic growth. Ukraine's national economy needs to move closer to knowledge-based economies, developing a strong production base and helping to increase productivity. This model of development will attract human capital to the processes of modernization and ensure equal access to knowledge, which is an important area of population activation and reduces the risk of structural unemployment, reduces poverty. This will help to entry into the new economy with a high level of production, high employment, productivity and social and territorial communities. This, in turn, will increase the welfare of the population, increase the effective protection of their fundamental rights and freedoms, and have a positive effect on the formation of a large and powerful middle class in Ukraine. This requires reforming institutions that should ensure the rule of law as well as overcoming obstacles to the development of civil society. There is also a necessity to create conditions for the use of the resource of "potential" public activity; improving the institutional support of public-private partnership; dissemination of awareness of their rights, European values, values of cooperation and cooperation through the education system; improving public information policy; and other. Citizens of the country will be able to meet material and socio-political needs, become active participants in the life of the country and the international community, by forming effective strategic priorities for the national economy of Ukraine and identifying vectors aimed at forming effective integration policy in the world economic space.

Keywords: national economy, strategy, strategic priority, capital, integration, world economic space.
